Rogue Valley Veterinary Hospital PC offers a unique K-9 Sports MED-HAB service and canine underwater treadmill. The underwater treadmill allows us to offer enhanced canine sports medicine for physical rehabilitation and conditioning for maximum performance.

We treat performance related injuries unique to the physical demands of agility, field trials, hunting, sledding, obedience and flyball sports.

Our sports MED-HAB service also offers conditioning and therapy programs for geriatric patients, post-operative or post-traumatic healing and weight control.

We provide physiotherapies including: Massage, therapeutic ultrasound, electrical muscle stimulation, therapy balls, cavaletti, ramps and hydrotherapy. These physiotherapies are beneficial to speed healing, reduce pain and encourage a healthy return to normal function. Hydrotherapy is also a way to encourage non-weight bearing aerobic exercise with the added benefits of water resistance and less strain on joints.
